PROFESSIONAL SUMMARY

Full-Stack Software Engineer with **4+ years of experience** contributing to enterprise and SaaS platforms that support complex business workflows, real-time data processing, and operational reporting. Has worked on systems involving multi-module web applications, secure backend services, and cloud-native infrastructure, handling everything from feature development and API design to containerized deployments and production support. Experience includes modernizing legacy systems, improving performance and reliability, implementing secure access controls, and enabling continuous delivery through automated CI/CD pipelines. Comfortable working across the full software lifecycle in Agile environments while collaborating closely with product, QA, and cross-functional engineering teams to deliver scalable, maintainable solutions.

- Built and maintained full-stack systems using **React, Angular, Node.js, and RESTful APIs**
- Worked on cloud-hosted applications deployed on **AWS and Azure** using **Docker and Kubernetes (AKS)**
- Contributed to **microservices-based and event-driven architectures**
- Hands-on experience with **CI/CD pipelines, monitoring, and production deployments**
- Strong collaboration with product, QA, and engineering teams to deliver reliable solutions

TECHNICAL SKILLS

Frontend: React, Angular, JavaScript (ES6+), TypeScript, HTML5, CSS3, Material UI, NgRx

Backend: Node.js, Express.js, Python, C, RESTful APIs, Event-Driven Architecture

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud & DevOps: Docker, Kubernetes (AKS), AWS, Azure, Jenkins, GitHub Actions, CI/CD

Observability & Testing: Prometheus, Grafana, Azure Application Insights, Jest, Selenium, Postman

Developer Tools: Git, Jira, Swagger/OpenAPI

PROFESSIONAL EXPERIENCE

KEE Technologies Group

Associate Software Engineer — Jul 2024 – Present

I worked on an internal enterprise platform that acted as a central system for managing and tracking tasks involving both internal teams and external customers and partners, similar to how tools like Jira support workflow management. The platform provided a structured process where requests from customers or partners were created as work items, routed through defined workflows, and assigned to the appropriate internal teams. Each item moved through clear stages such as intake, review, approval, execution, and closure, with status updates, comments, and ownership tracked at every step. The system enabled teams to collaborate more effectively, maintain transparency with stakeholders, and ensure accountability, while leadership gained visibility into workload, turnaround times, and bottlenecks through centralized dashboards and reports. Overall, the platform replaced scattered communication and manual tracking with a reliable, scalable workflow system that improved coordination, efficiency, and customer and partner engagement.

- Owned and delivered end-to-end full-stack features using **React, Angular, Node.js, and REST APIs** for business-critical internal workflows and reporting systems.
- Improved frontend performance by **50%** through optimized component rendering, memoization strategies, and state management patterns.
- Designed and implemented backend services for **authentication, authorization, reporting, and workflow orchestration**, improving system security and reliability.
- Established and maintained API contracts using **Swagger/OpenAPI**, enabling parallel frontend and backend development.

- Built event-driven asynchronous workflows using **Kafka and Azure Service Bus** to improve fault tolerance and scalability.
- Containerized applications using **Docker** and deployed them to **Azure Kubernetes Service (AKS)** with rolling deployments.
- Developed CI/CD pipelines using **Jenkins and GitHub Actions**, reducing deployment-related incidents.
- Implemented monitoring and alerting using **Prometheus, Grafana, and Azure Application Insights**.
- Collaborated cross-functionally with product managers, designers, and QA engineers to deliver features from design to production.

KEE Technologies Group

Software Engineering Intern — Dec 2023 – Jun 2024

Worked as a Software Engineering Intern supporting the development of multiple internal and client-facing web applications. Assisted senior engineers on full-stack projects involving real-time collaboration, workflow management, e-commerce functionality, and system monitoring. Gained hands-on experience working with modern web technologies, cloud platforms, and Agile development practices.

- Assisted in developing and enhancing **full-stack web applications** using **React, Angular, and Node.js**.
- Supported implementation of **backend APIs** and basic business logic for user management and workflows.
- Helped with building **real-time features** and interactive UI components under guidance from senior engineers.
- Contributed to **testing, debugging, and bug fixes** to improve application stability and reliability.
- Assisted with **containerization and deployments** using **Docker** and **Kubernetes** on **AWS and Azure**.
- Helped set up and review **monitoring dashboards** and logs for application health and performance.
- Participated in **Agile ceremonies** including daily stand-ups and sprint reviews.
- Collaborated with cross-functional team members to understand requirements and deliver assigned tasks on time.

CHUBB (India)

Software Engineer — Sep 2020 – Jul 2023

I worked on an enterprise insurance and claims management platform that supported end-to-end workflows including policy creation and updates, claims intake, validation, approval, payout processing, and internal operational support. The system handled sensitive customer and financial data, enforced complex business rules, and supported high transaction volumes while meeting strict security, compliance, and uptime requirements. A key focus of the project was modernizing legacy functionality in an incremental and controlled manner to improve maintainability and performance, while ensuring workflow continuity and uninterrupted business operations.

- Developed and maintained backend and full-stack features for large-scale enterprise insurance and claims management systems serving thousands of users.
- Designed and implemented **secure RESTful APIs** consumed by multiple frontend applications and internal services.
- Improved application performance by optimizing **database queries, caching layers, and service logic**, significantly reducing API response times.
- Led migration of selected legacy components to **containerized microservices** deployed on **Azure Kubernetes Service (AKS)**.
- Collaborated closely with business analysts and product owners to translate complex insurance workflows into scalable technical solutions.
- Implemented **role-based access control (RBAC)** and authentication flows to ensure compliance with enterprise security standards.

- Contributed to frontend development using **Angular**, building reusable components and implementing responsive UI workflows.
- Developed backend services using **Python and Node.js**, following clean architecture and SOLID principles.
- Participated in **Agile ceremonies** including sprint planning, backlog refinement, daily stand-ups, and retrospectives.
- Wrote comprehensive **unit and integration tests**, improving code coverage and reducing production defects.
- Reviewed peer code and provided constructive feedback to improve code quality, readability, and maintainability.
- Supported **CI/CD pipelines** by integrating automated testing and enforcing deployment best practices.
- Assisted with API testing, validation, and documentation using **Postman and Swagger/OpenAPI**.
- Investigated and resolved production issues by analyzing logs, monitoring metrics, and collaborating with cross-functional teams.
- Actively contributed to technical discussions and knowledge-sharing sessions, helping improve team-wide engineering standards.

EDUCATION

Master of Computer Science

2023 – 2025

Purdue University

Relevant Coursework: Distributed Systems, Cloud Computing, Software Architecture, Database Systems

Bachelor of Computer Science

2018 – 2022

Kakatiya Institute of Technology and Science

Focus: Data Structures, Algorithms, Object-Oriented Programming, Web Technologies
